

Feedback on the trial design / objectives (physiological breech birth care vs standard care):

Responses

Sounds very interesting.

Very interesting, easy to understand and full of practical examples! To improve the practice: maybe do smaller groups?

Appropriate design. Though how will women be randomised when breech diagnoses in labour?

Interested to see how women will respond to being out in standard v new design

Think that the trial design is great. Good luck

Makes much more sense than standard care practiced in my trust. N/A Good

Why dont you offer ecv to both groups and then randomise?

Interesting study, looking forward to hearing the results!

Sounds a great study and I look forward to being part of it at the Trust. I assume there will be appropriate specialist care for those woman wishing a vaginal breech birth in the standard care package? Will there be a clear construct of who is appropriate for breech birth eg EFW, type of breech, etc.

Brilliant idea . Look forward to results

Why does the randomised physiological breech births not offered an ECV?

Seems to be a clear pathway and an exciting prospect

Very clear what is being looked at

What happens if a breech specialist happens to be on duty when a woman randomised to standard care comes in?

All women should be given same specialist care, so I don't think it's fair for women on the standard care not to receive the best advice

Design appears good, try to ensure all staff have obligatory learning on breech birth as this will improve chances of having at lease a semi skilled professional at all births.

Brilliant idea Good idea to normalise breezy birth

Sounds amazing and I'd love to be part of this at Queen Charlottes but my only hesitation is funding. We would need help in funding the service.

Looks easy to follow. Simple Physiological breech birth Very good

Very well put together and informative

Sounds very good. Unsure how realistic the 24/7 availability of a specialist is...

Great to be able to watch so many videos and practice regularly so it will be easier to memorize the manoeuvres in the future

Very positive I now feel comfortable taking part in a vaginal Breech delivery

Do you also have ethics approval to collect outcomes for women who decline randomisation?

Sounds great and I am excited that my hospital is part of as I can't wait to be part of it.

First time I have ever had breech birth explained physiologically. This should be rolled or trust wise as a mandatory study day for GSTT. Provided a very balanced view with risks and benefits for both CS and VBB and physiological breech and intervention.

Real videos are a super plus, good way to put the theory in practice in a study day, everything much more clear

Think it was great to learn recent research and update on breech deliveries and its complications

Videos are very self-explanatory and is good to actually practice the manoeuvres hands on straight after.

Met the objectives well Met the objectives well Very positive Sounds good!

I feel that objectives would be really useful in practice Very informative

Well laid out and clear objectives Really exciting Really interesting

Really interesting good participation for breech manoeuvres great workbook

Excellent study day Very useful and informative It's very logical and clear

Amazing course and very useful! Really helpful! Thank you

Much easier to understand and helpful It would be a very useful in practice

Looks good

100%
